

# Benson IT Solutions, Inc. Web Calendar version 4.x

Revised and supported since 2000, this web calendar system has many features:

- Works with Adobe Macromedia Cold Fusion server 4.5 to 7
- Prints to pdf from calendar view (Cold Fusion server 7)
- Add / edit calendar event categories
- Relate users to categories
- Filter calendar data by event category
- Assigns colors to categories using an easy color choosing tool
- Yearly view shows color coded events on a 12 month view calendar
- Export events to desktop applications
- Sync single events to a iCal file
- Download search results to a .csv file for import to desktop applications
- Add and edit calendar user groups
- Users can be assigned to groups so events can be made private at a group level
- Integrates with BIT resource scheduler
- BIT resource scheduler is a separate application that allows easy scheduling of almost any resource type, i.e., conference rooms, laptops, cars, etc. The resource scheduler requires an additional license fee and can used with or without the calendar.
- Integrates with BIT action item tracking system
- In order to demonstrate this feature a user must login. The action item tracking system will require a small additional license fee and can be operated with or without the calendar.
- All source code is unencrypted
- This feature makes it easier to fit to the scheme of any web site.
- Events can be grouped by task type
- If an event is related to a task then it can only be viewed by users that have access to that task.
- Weekly, monthly and list formatted calendar views available
- Make events public or private
- If an event is private then only users that are in the related category can see the event.
- Calendar news feature
- Easily post news for calendar users
- Maintain an archive of past news
- Each user can have multiple phone numbers listed in the built-in phone book
- Upload unlimited images for calendar events and calendar news
- Previous and next-month views on main calendar
- Easy navigation to add events
- Set times for each event.
- Each event displayed in corresponding time blocks in View-Day page.
- Configure the start and end time options during install
- Controls the user data input screen options
- Easily add repeating events (weekly or daily)
- Uses Microsoft access database
- Can be upgraded / imported to SQL Server, MYSQL or other server database applications.
